

Finally... *A Non-Invasive Solution for Peripheral Vascular Disorders!*

Introducing

THE NORMATEC PCD

State-of-the-Art Dynamic Compression Technology

The NormaTec PCD (Pneumatic Compression Device) offers rapid, highly effective treatment for:

- ⦿ Venous stasis ulceration/Chronic wounds
- ⦿ Venous insufficiency
- ⦿ Lymphedema
- ⦿ Other peripheral vascular conditions

Featuring

The Peristaltic Pulse Pneumatic Waveform

**A major scientific advance beyond
intermittent sequential compression**

- Patented technology
- Uses concepts found in normal physiology
- FDA cleared
- Easy to prescribe and use
- Covered by health insurers including Medicare and HMOs

PCD Features

For the Patient

Designed for independent home use
Painless, non-invasive treatment
Extremely simple to use
Patient friendly touch-pad controls
Exclusive don assists for easy on/easy off
“Can’t-make-a-mistake” connections
Unique toe cap design enhances patient comfort
Covered by health insurers including Medicare and HMOs

For the Physician/Health Care Provider

Highly effective clinical outcomes in as little as 1 hour a day
Easy to prescribe
Exclusive Peristaltic Pulse pneumatic waveform
Dynamic compression simulates normal physiology
Independent Segment Control allows complete clinical flexibility
Individualized device parameters electronically locked in
Automatic adjustment for one or two limbs
Exclusive “pre-fill” inflation sequence custom-forms boots/sleeves to each patient
Compliance Monitor discreetly tracks patient use
Clinically inappropriate pressures and reverse gradients cannot be inadvertently programmed
Custom boots/sleeves available for any size patient (pediatric through bariatric)
Pelvic/scrotal appliance also available
Significantly reduces overall healthcare costs
Treats disorders previously thought refractory to most treatments
Experienced NormaTec nurses available for prescriber and patient consultation

General

FDA cleared
Designed by MD/PhD (bioengineering)
Electronic controls
Meets demanding UL 2601 and CE standards
Numerous safety features
Simplicity of design and operation
Lightweight for easy traveling
Quiet operation
Durable
Precision-built with long life compressor and components

Indications for Use

The Treatment of:

- Venous stasis ulceration/Chronic wounds
- Venous insufficiency
- Post-mastectomy lymphedema
- Acquired lymphedema (secondary to cancer or following trauma, inflammation, infection, surgery and/or radiation treatment)
- Congenital lymphedema
- Other edematous conditions

The Prevention of:

- Deep vein thrombosis

Easy-on/easy-off assist device for complete patient independence
